VESTABOARD

Position this template on the wall to visualize placement of your Vestaboard Note

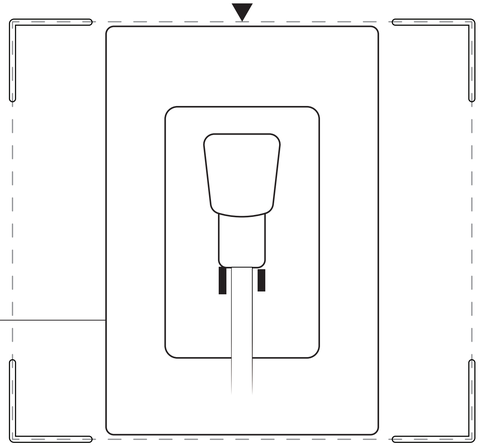
Once you’ve chosen a location for your Vestaboard Note, remove the adhesive backing and place this template on the wall. Level the template and trace the wall plate cutouts aligned with your wall studs.

The included wall mount supports the following concealed power outlet orientations

You should work with a licensed electrician to install power in the way that best fits your space.

Longer accessory cables are available if your outlet sits below Vestaboard Note. These cables and more information about installation can be found by scanning the QR code.

vestaboard.com/support



Vertical Recessed Wall Outlet (left)

We recommend a recessed outlet for concealed power and compatibility with all regional power cables. Trace the outline for the safe area to install your recessed outlet between the vertical rails pre-installed on your Vestaboard Note.

Horizontal Standard Wall Outlet (below)

If installing a standard wall outlet, trace this outline to fully hide it behind your Vestaboard Note. This is the only area with enough clearance for most standard outlets, but some regional plug shapes may still require a recessed outlet.
